Foreword

By Peter Dymond, Chief Coastguard, Maritime & Coastguard Agency

The consortium-based approach to conducting research in watersports and water-based leisure participation is now into its 5th year and continues to be an invaluable piece of research information for the recreational maritime sector. The Report for 2005 now accounts for a fifth of all downloads from the National Water Safety Forum website.

In 2006, we have, for the first time, included trend lines for gender and age participation and on top of that we have added seasonal data to provide an indication of numbers participating throughout the various seasons.

The ability to capture information over an extended period of time is now providing us with more robust statistics, analysis of which supports the assertion that the recreational maritime market has a significantly large customer base

Further analysis of this research will, when compared against reliable water-related accident data, also provide valuable evidence to help support inter-agency safety promotion work.

This is particularly important as coastal zone access improves, more people begin to recognise the health benefits of active pastimes, and the preparation for the 2012 Olympic Games captures the interest of the public and encourages people to get involved in watersports.

Hopefully this research and subsequent analysis will assist us to ensure that however many people take part in waterborne activities, we can all help to make sure they do so more safely.

I hope that you find this Report both interesting and informative.

Executive Summary

Key findings from Watersports and Leisure Participation Report 2006

This is the fifth year that we have undertaken this type of research and we are starting to establish a firm foundation for assessing trends in participation.

The watersport participation for the original 12 activities stands at **up to 3.7 million adults**, compared to 3.5 million in 2005¹. This figure is still slightly below the 2004 figure of 4 million adults. Some activities have seen changes in their participation rates that are considered significant, e.g. Using personal watercraft has fallen by 0.21% and canal boating has risen by 0.25% from last years figures.

The above headline figures is based on our best estimate for the participation rate for "Any boating activity"² is 7.25% (± 0.0385 percentage points). When we apply this participation rate to the UK adult population of 48,184,000, we get to a UK base participant number of 3,494,000 (rounded to the nearest thousand). Any estimate based on a sample of the population (in this case 12,000 respondents) is only accurate within defined statistical confidence intervals. This means we are 90% certain that the true number of people participating in "Any boating activity" lies between 3,309,000 and 3,680,000 participants i.e. up to 3.7 million.

The headline figures when taking all 21 surveyed activities into account³ is up to 13.8 million people, up from 12.9 million (or a 1.74 percentage point increase) in 2005. Our best estimate for the participation rate for "Any activity" is 28.03% of adults in the UK. Applied to the UK adult population, quoted above, this gives us a participant number of 13,506,000 for "Any activity" (rounded to the nearest thousand). As above, this number has to be viewed within defined confidence intervals. We are 90% certain that, for "Any Activity", the true number of participants ranges between 13,185,000 and 13,827,000 people.

11 of the 21 activities are becoming more popular, even though some of these show only very small increases, which may not be significant. Significant rises have been recorded for:

- Angling from the shore (+0.34%),
- Canal boating (0.25%),
- Outdoor swimming (1.75%), and
- Spending general leisure time at the beach (0.99%).

Canoeing, Motor Boating/Cruising, Yacht cruising, small sailboat racing, Yacht racing, Surfboarding and Angling from a Boat on the other hand have seen rises, which are not statistically significant.

When analysing how the participation rates for the individual activities developed over the past 5 years by introducing a regression trend line, the participation rate for any boating activity

¹ When comparing actual numbers of participants over all five years it needs to be borne in mind that prior to 2005 the survey did not include Northern Ireland.

² "Any Boating Activity" includes Small sail boat racing, Yacht racing, Yacht cruising, Power boating, Motor boating/Cruising, Using Personal Watercraft, Rowing, Canoeing, Canal boating, Water skiing and Windsurfing)

³ "Any Activity" includes all of the boating activities above plus Surfboarding, Angling from the shore, Angling from a boat, Outdoor Swimming, Leisure Sub Aqua diving, Cliff Climbing, Coastal Walking, Spending General Leisure time at the beach and Kitesurfing)

shows a small but steady decline. When looking at the activities singularly then only motor boating/cruising and canal boating show a trend of an increase in participation rates.

As in previous editions, when considering participation rates by socio-demographics, it is apparent that for most activities men participate more than women. Female participation rates are more stable than those for men over the past 5 years. Canal boating shows different directions in participation trends for males and females, with females showing an increase and men a decrease.

Younger age groups exhibit higher participation rates than older ones for any boating activity. However, when taking all activities into account the 35-54 age group shows the highest participation rate. When looking at participation over the years by age groups there is a declining trend for any boating activity for the 16-34 age group, whereas the 35-54 age group shows a small increase.

The socio-economic group AB records higher participation rates than the other socio-economic groups. However, in absolute numbers there are more people from the group C1 participating in many of the activities given there are a lot more people in this group than in others.

People living in a student/workers house share have the highest participation rate for any activity, 34% of respondents from this group having participated in at least one of the surveyed activities in the past year, closely followed by families, 33.8% of respondents from this life stage group having participated in any activity. However, due to the larger number of people in the family category, families account for the majority of participants in absolute numbers for almost all activities.

More participation is taking place in the UK than abroad. This is especially true for Canal boating, where over 95% of respondents are only participating in the UK. The number of times people are participating in the activities is also higher in the UK than abroad. This is maybe not surprising as most people will be in the UK for most of the year and will only be abroad when on holidays. Using personal watercraft and Leisure sub-aqua diving have the highest proportion of respondents saying that they never participate in the UK.

Not surprisingly, the majority of actual participating occurrences (events) are taking place in the summer when over 50% of events for the majority of events are happening. Rowing, angling from the shore and coastal walking record around 40% of their total events in the summer, with the other seasons still attracting a considerable proportion of events.

81% of the total events recorded in the UK for any activity are taking place at the coast in 2006. Taking an average over the past 3 years this proportion stands at 85%. 46% of the total events for any boating are taking place at the coast in 2006.

Club membership for the surveyed activities is generally low. Four of the core sports and eight of all activities have less than 5% participants covered by club membership. Only Small sail boat racing, Yacht racing, Yacht cruising and Leisure sub-aqua diving record club membership proportions of approximately 30%.

With a headline figure of up to 13.8 million people, just over a quarter of the UK adult population, taking part in activities in and around our coasts and inland waterways there is clearly a large potential market for boating and watersports enthusiasts. The detail given in the following report, allows a fuller insight into patterns of participation by UK citizens.

1. Introduction

Deleted:

The purpose of the Watersports and Leisure Participation Survey 2006 is to provide robust estimates of the level of participation in a range of watersports and water based leisure activities across the United Kingdom. Surveys in 2002, 2003 and 2004 jointly commissioned by the BMF (British Marine Federation), RYA (Royal Yachting Association) and Sunsail covered a list of 12 watersports. In 2004 the MCA (Maritime and Coastguard Agency) also conducted independent research into participation in 20 leisure based watersport and coastal activities. Since 2005 the BMF, MCA, RNLI, RYA, and Sunsail have carried out research as one consortium and extended the list of activities covered to 21 to meet the needs of everyone.

With the 2006 results we are able to give an insight into annual trends by activity over 5 years (from 2002) for the original 12 BMF, RYA and Sunsail activities, and annual trends over the past 3 years for the additional 9 activities first surveyed in the MCA omnibus survey in 2004.

The data on which the analysis has been based comes from a nationally representative sample of around 12,000 respondents across the United Kingdom (England, Scotland, Wales and Northern Ireland). The surveys prior to 2005 only covered Great Britain (England, Scotland and Wales), as there was no omnibus survey facility in place covering Northern Ireland. The weighted sample delivers information from a representative cross section of the UK population in terms of age, gender, socio-economic grouping and origin.

The Questions

Each respondent was asked if they had taken part in each of the 21 leisure based watersport or coastal activities over the 12 months preceding September 2006. As far as possible the descriptions of each activity were provided in layman's terms to allow all respondents, whatever their level of expertise, to give accurate replies. Additional explanation was provided when requested by the respondent (see Appendix 1 for definitions).

For those activities which respondents had taken part in within the last 12 months, they were asked how often they had participated. The question was split into two parts covering participation in the UK (this was asked of all 21 activities) and participation abroad (asked of the original 12 activities).

As in 2005, we ensured that the extension of the activities list did not have an effect on the participation rates of the original 12 activities and therefore affect comparability. This was achieved by ensuring that the 12 original activities were always asked before any of the 9 added activities. These 3 questions form the scope of the original BMF, RYA and Sunsail questionnaire (Appendix 1).

The Data

A brief overview of how to interpret the tables is given with Table 2. Each section of the report is supported by written commentary explaining any assumptions made and to assist interpretation of the data. All figures throughout for 2005 and 2006 include participants in Northern Ireland.

When assessing the contents of this report it must be remembered that only a small number of people from the surveyed sample take part in some of the measured activities. Small base sizes for these activities mean that small fluctuations may have a sizeable effect on the weighted data that is reported. Activities where the base sizes are very small where results are indicative only have been marked with a "**".

2. Participation in Surveyed Leisure Activities 2006

Table 1 details the participation in the surveyed activities in 2006. The table covers participation in the UK and abroad, i.e. if a respondent said that he participated in an activity in the past 12 months he is regarded as a participant.

Table 1 Watersports and Leisure Participation 2006

	Participation rate 2006					Number of participants 2006		
	% for 2006	Min		Max		Number of participants for 2006	Min 90% Number of participants	Max 90% Number of participants
		95%	90%	90%	95%			
Any Activity	28.03%	27.23%	27.36%	28.70%	28.83%	13,505,943	13,185,000	13,827,000
Any boating activity	7.25%	6.79%	6.87%	7.64%	7.71%	3,494,069	3,309,000	3,680,000
Canoeing	2.21%	1.95%	1.99%	2.43%	2.47%	1,065,665	960,000	1,171,000
Water skiing	0.67%	0.53%	0.55%	0.80%	0.82%	324,597	266,000	383,000
Small sail boat activities	1.09%	0.91%	0.94%	1.25%	1.28%	527,245	453,000	602,000
Rowing	0.92%	0.75%	0.78%	1.06%	1.09%	442,770	375,000	511,000
Windsurfing	0.54%	0.41%	0.43%	0.65%	0.67%	262,093	209,000	315,000
Using personal watercraft	0.57%	0.44%	0.46%	0.68%	0.71%	275,836	222,000	330,000
Motor boating/Cruising	1.19%	1.00%	1.03%	1.35%	1.38%	573,035	495,000	651,000
Yacht cruising	0.68%	0.53%	0.56%	0.80%	0.82%	327,140	268,000	386,000
Power boating	0.74%	0.59%	0.62%	0.87%	0.90%	358,590	297,000	420,000
Small sail boat racing	0.39%	0.28%	0.30%	0.48%	0.50%	188,174	144,000	233,000
Canal boating	0.80%	0.64%	0.67%	0.93%	0.96%	384,282	321,000	448,000
Yacht racing	0.23%	0.15%	0.16%	0.30%	0.32%	111,347	77,000	146,000
Surfboarding	1.32%	1.12%	1.16%	1.49%	1.53%	638,371	557,000	720,000
Kitesurfing	0.09%	0.04%	0.05%	0.13%	0.14%	43,494	22,000	65,000
Angling (from a boat)	1.12%	0.93%	0.96%	1.28%	1.31%	539,477	464,000	615,000
Angling (from the shore)	2.27%	2.01%	2.05%	2.49%	2.53%	1,094,016	987,000	1,201,000
Cliff climbing	0.91%	0.74%	0.76%	1.05%	1.07%	436,164	368,000	504,000
Coastal walking	12.21%	11.63%	11.72%	12.70%	12.79%	5,883,348	5,649,000	6,118,000
Outdoor swimming	12.35%	11.76%	11.86%	12.84%	12.93%	5,950,075	5,715,000	6,185,000
Leisure sub-aqua diving (from the shore and boat)	0.79%	0.63%	0.66%	0.92%	0.95%	380,546	317,000	444,000
Spending general leisure time at the beach	12.49%	11.90%	11.99%	12.98%	13.07%	6,015,909	5,779,000	6,252,000
Base	12,203					48,184,000	48,184,000	48,184,000

Source: Watersports and Leisure Omnibus Survey 2006

The first column of Table 1 titled '% for 2006' is our best estimate of participation rates for each activity in 2006. The figure of 28.03% is our best estimate for participation in 'any' of the 21 activities asked about. We also show the best estimate of actual participation in any of the original 12 watersports as measured by the survey. This participation rate is 7.25% (labelled "Any boating activity"). However, it should be borne in mind that any estimate based on a sample of the population is only accurate within the statistical confidence interval outlined above.

The next four columns give an indication of our lower and upper estimates of participation within different levels of confidence. For example, we are 90% confident, that the participation rate for Yacht racing lies between 0.16% and 0.30% of the UK adult population.

In the next column we convert our best estimate participation rate for 2006 into an estimate of likely numbers of participants in each activity. These are based on a total population 16+ of 48,184,000 in the UK. In the next 2 columns we show the participant numbers at the 90% confidence interval. E.g. we are 90% confident that the number of participants in coastal walking lies between 5,649,000 and 6,118,000 people. The population numbers prior to 2005 did not include Northern Ireland and this should be borne in mind when making comparisons with earlier numbers.

Table 2 compares the participation rates as established in the 2006 survey with last year's participation rates.

The 2006 data shows a rise in participation rates compared with 2005. 12 activities registered a rise in participation rates, although not all these rises are significant, hence only significant changes are highlighted in bold above

In interpreting the figures it is important to consider whether they reflect a real change in participation or a random fluctuation in the data. For example in 2005 we estimated canoeing participation at 2.09%, in 2006 we have estimated it at 2.21%. This is an increase of 0.13 percentage points. However, this is a relatively small increase and it is only significant at a confidence level of 50.1%, i.e. it is just as likely that this is a random variation as it is that it reflects a real change. We would therefore interpret this data as saying there is no change in the number of canoeists. As the level of change increases, the likelihood that it is caused by random variation declines and it is increasingly likely to reflect a real change. The figures in the column 'Significance Measure' indicate whether the observed changes are more likely to be real changes as opposed to sample error. The figures are highlighted in red and bold if the significance measure of the change is bigger than 90%, which indicates that only 1 in 10 times is the data likely to be just a random fluctuation. Hence, only a third of the changes (7 activities) are considered to be large enough to indicate reliable changes in participation.

Table 2 Difference in participation rates 2006-2005

	Participati on rate 2006	Participati on rate 2005	Change (percentage points)	Significance
Any Activity	28.03%	26.29%	1.74%	99.8%
Any boating activity	7.25%	6.85%	0.41%	78.4%
Canoeing	2.21%	2.09%	0.13%	50.1%
Water skiing	0.67%	0.77%	-0.10%	63.3%
Small sail boat activities	1.09%	1.12%	-0.03%	17.3%
Rowing	0.92%	0.99%	-0.07%	40.7%
Windsurfing	0.54%	0.58%	-0.03%	25.8%
Using personal watercraft	0.57%	0.78%	-0.21%	95.4%
Motor boating/Cruising	1.19%	1.19%	0.00%	2.3%
Yacht cruising	0.68%	0.66%	0.02%	16.5%
Power boating	0.74%	0.76%	-0.01%	8.3%
Small sail boat racing	0.39%	0.30%	0.09%	76.2%
Canal boating	0.80%	0.54%	0.25%	98.4%
Yacht racing	0.23%	0.17%	0.06%	72.5%
Surfboarding	1.32%	1.26%	0.07%	37.0%
Kitesurfing	0.09%	0.22%	-0.13%	99.0%
Angling (from a boat)	1.12%	0.97%	0.15%	74.8%
Angling (from the shore)	2.27%	1.93%	0.34%	93.9%
Cliff climbing	0.91%	0.94%	-0.03%	21.6%
Coastal walking	12.21%	12.15%	0.06%	11.3%
Outdoor swimming	12.35%	10.59%	1.75%	100.0%
Leisure sub-aqua diving (from the shore and boat)	0.79%	1.17%	-0.38%	99.7%
Spending general leisure time at the beach	12.49%	11.50%	0.99%	98.3%
Base	12,203	12,191		

Table 3 shows the participation rate in activities of particular interest to the RYA, which have been combined into one variable. These are the original 12 activities bar rowing, water skiing and canoeing. The rise in 2006 compared to 2005 is not statistically significant.

Table 3 Participation in RYA interests 2006

	2005	2006	% Change
Participation Rate (min and max 90%)	4.88% (4.56-5.20)	4.92% (4.60-5.24)	0.04%
Number of participants	2,184,000-2,490,000	2,215,000-2,525,000	0.14%
Base	12,191	12,203	≅0
Total Population	47,858,000	48,184,000	≅0

Emerging trends

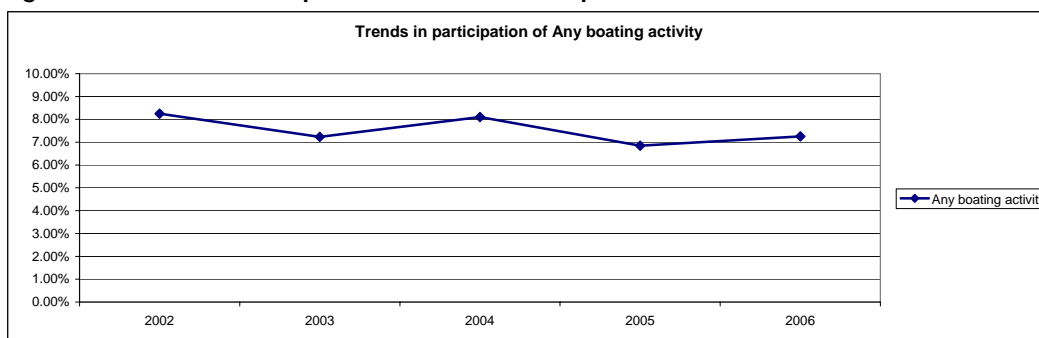

The following charts give insight into the participation trends for grouped activities from 2002 to 2006 and for “any boating activity” as a whole, covering the original 12 BMF, RYA and Sunsail activities. For the activities that were added in 2004 we can now provide trends over the past 3 years. The activities are grouped together into sailing sports (small sail boat racing, other small sail boat activities, yacht racing, yacht cruising and windsurfing), power sports (power boating, general motor boating, canal boating and using personal watercraft) and manual sports (canoeing, rowing and water-skiing).

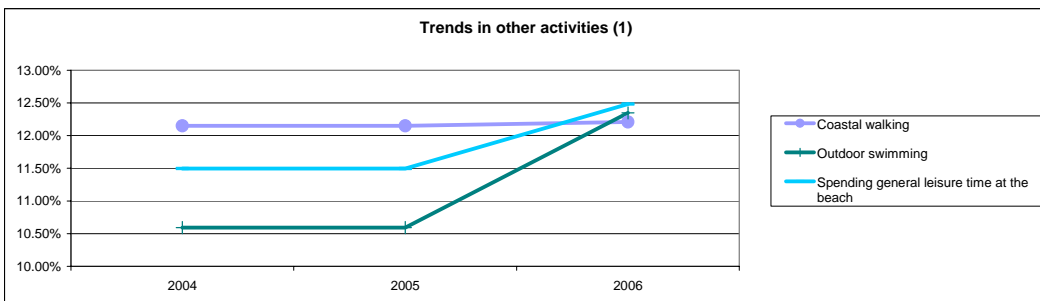

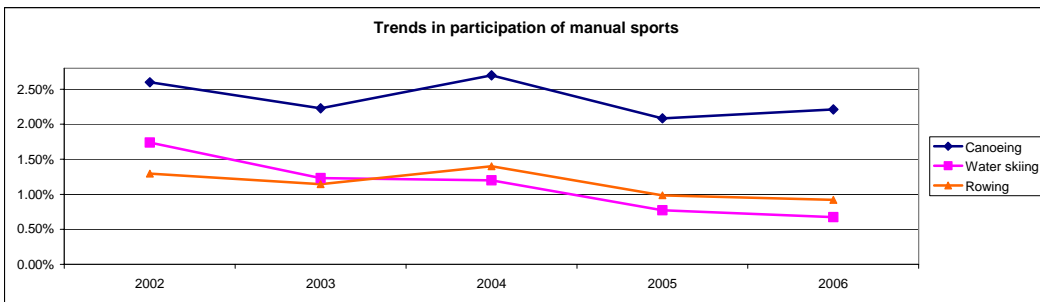

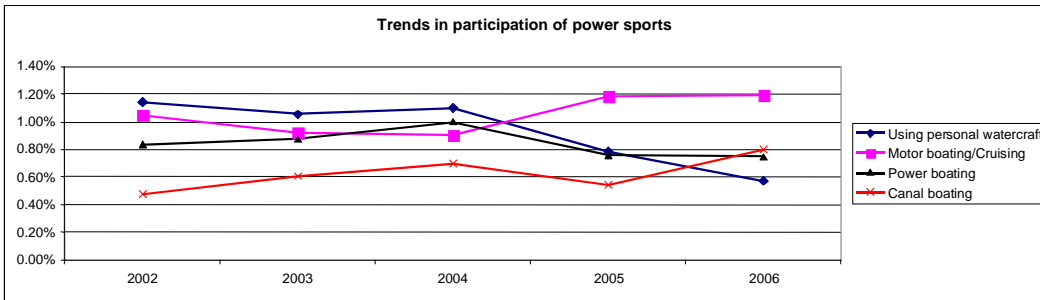

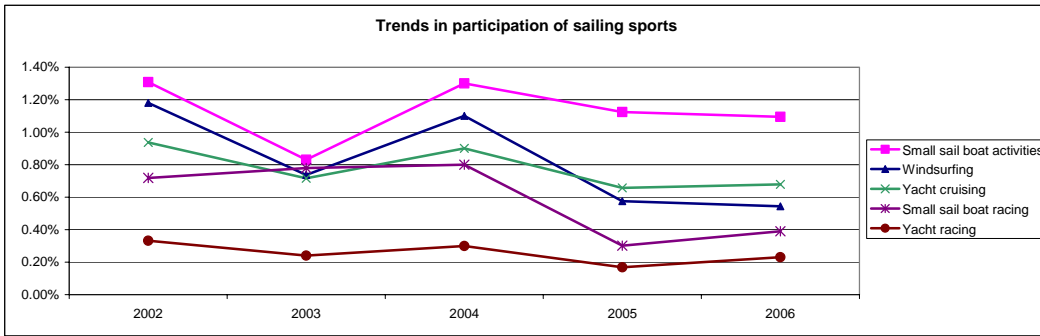

Of the original 12 activities, 5 activities have seen a rise in participation levels in 2006, even though this rise is sometimes very small and may not be significant. The only significant changes are a decline in using personal watercraft (-0.21%) and an increase in canal boating (+0.25%). The other 7 original activities have seen mostly minor declines in participation rates.

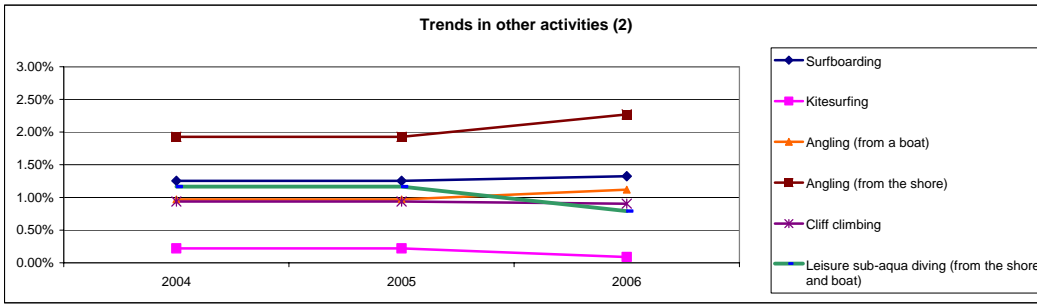

Of the other activities, spending general leisure time at the beach, outdoor swimming, angling from the shore and boat, surfboarding and coastal walking, have seen rises in participation levels in 2006, all but coastal walking can be demonstrated as significant.

It is encouraging to note that now we have 5 years of data we can be increasingly confident about the general levels of participation in each activity and can perceive some trends within the data. For example, there appears to be a gradual decline in windsurfing, using personal watercraft and water skiing since 2002. Motor boating/cruising and canal boating on the other hand have seen a gradual increase. Outdoor swimming and spending general leisure time at the beach both have seen an increase compared to previous years, and the increase in these activities seems to be closely related to each other. The additional sample (i.e. approx 12,000 vs 6,000) seems to have added greater stability to the data year on year.

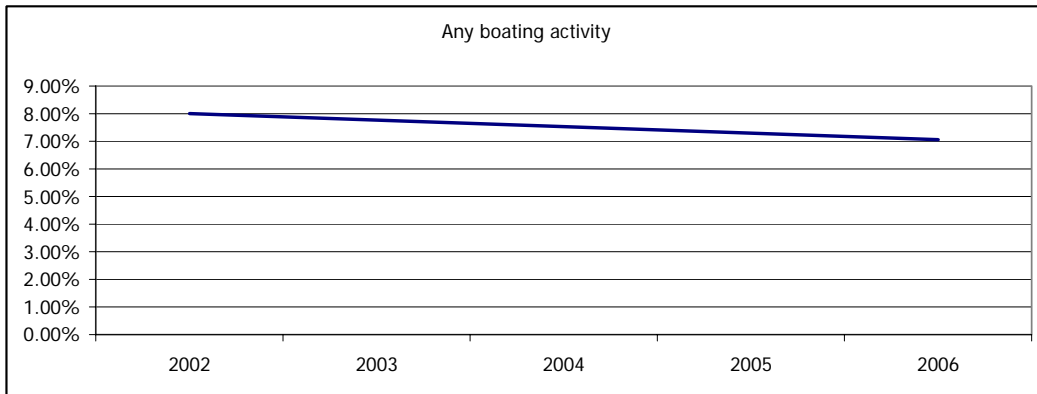

Figure 1 Trends in Watersports and Leisure Participation 2002 to 2006

The following chart shows the linear regression trend line for any boating. We have not provided these for any activity, as we only have 3 years data for it. Motor boating/cruising and canal boating are the only activities which show an upwards trend line. The trend line for small sail boat activities shows a stable participation over the past five years.

3. Participation by Socio-Demographic Groups

The following tables show activity participation by age groups, gender and Socio-Economic Group (SEG) as well as lifestage and working status. For each of these groups there are two tables. One showing the participation rates as a percentage and one that converts these percentages into actual participant numbers based on the overall **UK** adult population (those aged 16+), i.e. Great Britain and Northern Ireland.

Participation By Gender

The table below shows that overall activity rates for men and women are quite similar (30% for men and 27% for women). However, males are more likely to participate in nearly all the surveyed activities than women. With respect specifically to the original 12 activities the difference between male and female participation essentially means that for every 3 men participating there are only 2 women. Only the participation rate for canal boating, and spending general leisure time at the beach is significantly higher for women than for men ($\times 1.45$ and 1.19 respectively).

The gap between male and female participation is largest in specialist sports. We have highlighted the male participation rate for an activity in blue and bold, if it is more than twice the female participation rate.

Table 4 Participation by Gender

	Male	Female	Total UK
Any Activity	29.58%	26.57%	28.03%
Any boating activity	8.89%	5.71%	7.25%
Canoeing	3.01%	1.46%	2.21%
Water skiing	0.98%	0.39%	0.7%
Small sail boat activities	1.22%	0.98%	1.1%
Rowing	1.22%	0.63%	0.9%
Windsurfing	0.74%	0.36%	0.5%
Using personal watercraft	0.71%	0.44%	0.6%
Motor boating/Cruising	1.56%	0.84%	1.2%
Yacht cruising	0.66%	0.70%	0.7%
Power boating	1.01%	0.49%	0.7%
Small sail boat racing	0.45%	0.33%	0.4%
Canal boating	0.65%	0.94%	0.8%
Yacht racing	0.26%	0.20%	0.2%
Surfboarding	1.73%	0.94%	1.3%
Kitesurfing	0.11%	0.07%	0.1%
Angling (from a boat)	1.98%	0.31%	1.1%
Angling (from the shore)	4.05%	0.60%	2.3%
Cliff climbing	1.12%	0.70%	0.9%
Coastal walking	12.15%	12.27%	12.2%
Outdoor swimming	12.71%	12.00%	12.3%
Leisure sub-aqua diving (from the shore and boat)	0.92%	0.66%	0.8%
Spending general leisure time at the beach	11.35%	13.55%	12.5%
None	70.42%	73.43%	72.0%
Base	5,515	6,688	12,203

Table 5 Participation by Gender – Participant Numbers

	Male	Female	Total UK
Any Activity	6,912,964	6,593,024	13,505,988
Any boating activity	2,078,363	1,415,718	3,494,081

None	16,456,354	18,221,819	34,678,173
Base	5,515	6,688	12,203

We also looked male and female participation rates for the past 5 years, to see if there are any differences in the trends by gender. In general female participation rates show less variation over the years. For most activities female and male participation show the same trend, i.e. they either both go up or both go down. The exception is canal boating, where female participation shows an upward trend and male participation shows a downward trend.

Table 6 Participation trends by gender

	Male					Female

Overall participation rates for females have stayed very stable, whereas males show a steady decline.

Participation By Age

Since 2005 there has been an increase in activity across all age groups. However, the 35-54 age group show the greatest growth and now more people in this age group are active across all activities than in the younger age group. However, this change is largely driven by the more leisurely pastimes like coastal walking, beach leisure and angling. While the gap has narrowed the under 35's are still more active in most boating sports, especially watersports such as canoeing, windsurfing and rowing.

We have highlighted activities in blue and bold where the participation rate is higher in the 35-54 age group than in the 16-34 age group. The participation rate for Leisure sub-aqua diving is higher for the 35-54 age group than in the younger age group. The overall pattern seems to suggest that cost and level of activity have an influence on the level of interest in particular activities in the 35-54 age group.

Table 7 Participation by age groups

	Age groups			Total UK
	16-34	35-54	55+	
Any Activity	32.73%	33.57%	18.81%	28.03%

When looking at participation by age over the past 5 years, the 16-34 age group has seen a continual decline for any boating activity from 2002 to 2006, the 35 and 54 age group has seen ups and downs in participation but the general trend is a slight increase in participation, whereas the trend for the 55+ age groups shows little variation.

Table 9 Participation trends by age

Some activities, like canal boating, show a steady increase in participation rate for all age group, whilst windsurfing, has a decrease in participation rates, showing similar trends for the different age groups. For other activities the trends by age group show a different pattern. For

example canoeing, yacht cruising and power boating show declining participation rates for 16-34 year olds but slight increases in participation rates for 35-54 year olds.

Participation By SEG

The socio-economic groups AB have generally a substantially higher participation rate than the other groups. The gap for all activities has also slightly widened since 2005 from 8.3% to 9.5% between the AB and C1 groups. Participation rates have been highlighted in blue and bold, where the participation rate in either the C1 or C2DE socio-economic groups is higher than for ABs.

Table 10 Participation by SEG

Spending general leisure time at the beach	18.71%	13.78%	9.42%	12.49%
None	58.78%	68.29%	78.99%	71.97%
Base	2,175	3,129	6,899	12,203

The much greater number of people in the C1 socio-economic group compared to those in the AB group means that despite lower participation rate, they are often the largest population group in absolute numbers. For example, the percentage for yacht racing is 0.41% for both AB and C1 groups, however this equates to 38,626 and 56,510 people respectively revealing a higher number of participants in the C1 category. Absolute participation numbers have been highlighted in blue and bold where these higher in either the C1 or C2DE socio-economic groups than for ABs. For the following activities the highest participation category is C1.

- Rowing
- Windsurfing
- Using Personal Watercraft
- Yacht cruising and racing
- Power boating
- Small sail boat racing
- Canal boating
- Surfboarding

- Kitesurfing

Highest absolute participation numbers are from C2DE for:

- Angling from a boat or the shore
- Cliff climbing
- Outdoor swimming
- Leisure sub-aqua diving
- Spending general leisure time at beach

Of the 21 activities, only 4 - Canoeing, small sail boat activities, motorboating/cruising and coastal walking - have the highest absolute numbers in the AB category.

Participation By Working Status

When looking at the participation by working status the participation rate of those working is higher than retired and non-working groups. Retired people are least active. This is likely to reflect the age of the different groups.

Table 12 Participation by Working Status

	Working status			Total UK
	Working	Retired	Other non-working

Participation By Lifestage

The following tables show the participation rates for the individual activities by life stage. The life stage definitions have been constructed from the information available and are defined as below.

Figure 2 Life stage explanation

Life Stage	Definition
Student/Workers house share	Two or more adults not living as a couple, without children (up to the age of 54).
Single	One person living alone either single/widowed/divorced/separated.
Couple under 55	Two married or living as married no children and under 55.
Single parents	One parent with one child or several children in household.
Family	Household of 2 adults with children.
Empty nesters	Two people 55 to 65 living in house with no children
Greys	Two or more people over 64 living in house with no children or living alone and over 64

Families record the highest participation for spending general leisure time at the beach, followed closely by couples under 55. For the very active activities like Surfboarding, Windsurfing and Cliff climbing the lifestage group with the highest participation rate are those in a student/workers houseshare. We have highlighted the biggest participation rate (in Table 14) and the largest absolute participation number (in table 15) in blue.

Table 14 Participation by lifestage

	Life stage							Total UK
	Student/Workers house share	Single	Couple under 55	Family	Single parents	Empty nesters	Greys	
Any Activity	34.0%	26.97%	35.03%	33.80%	28.99%	26.84%	12.80%	28.03%

Yacht racing	0.45%	0.15%	0.00%	0.37%	0.20%	0.22%	0.08%	0.23%
Surfboarding	3.54%	1.29%	2.06%	1.16%	2.36%	0.11%	0.03%	1.32%
Kitesurfing	0.46%	0.08%	0.00%	0.06%	0.13%	0.00%	0.00%	0.09%
Angling (from a boat)	1.10%	1.18%	2.03%	1.57%	0.78%	0.33%	0.43%	1.12%
Angling (from the shore)	1.92%	2.43%	3.33%	3.26%	1.59%	2.12%	0.69%	2.27%
Cliff climbing	2.76%	1.22%	1.01%	0.76%	1.14%	0.18%	0.09%	0.91%
Coastal walking	10.26%	12.48%	14.91%	15.61%	10.25%	14.23%	6.59%	12.21%
Outdoor swimming	17.89%	10.43%	15.28%	15.19%	17.18%	9.46%	3.33%	12.35%
Leisure sub-aqua diving (from the shore and boat)	1.40%	0.98%	1.21%	0.89%	1.03%	0.38%	0.06%	0.79%
Spending general leisure time at the beach	11.48%	11.48%	16.09%	16.30%	15.14%	10.78%	5.31%	12.49%
None	65.97%	73.03%	64.97%	66.20%	71.01%	73.16%	87.20%	71.97%
Base	1176	1,130	1,137	3,601	1,118	1,007	3,034	12,203

When the size of each lifestage group is taken into account the importance of families becomes very apparent, with almost 40% of all participants in all activities belonging to this group and 35% of participants for the original 12 boating activities.

Participation by Socio-Demographic Groups Using Watersports categories

Table 16 and Table 17 show the profile of people participating in grouped watersport activities by sex, age groups, SEG, ITV regions and lifestage (white copies) and significant falls are highlighted with a light blue background (or light grey in black and white copies).

As in previous years Males, 16-34 year olds and those belonging to the AB social-economic grouping record the highest participation rates. These tables were part of the previous BMF, RYA and Sunsail reports and have been included again for comparability to previous reports.

By aggregating the activities into 3 core categories we can provide more robust estimates of the socio-demographic participation. The original 12 activities have been grouped and included to enable comparison with the previous BMF, RYA, and Sunsail reports from 2002 to date.

We have compared the figures from 2006 with the figures of the 2005 report. Significant rises are highlighted with an orange background (or darker grey in black and white version).

There are interesting changes observed in term of regional participation rates.

- Respondents from the Wales/West/South West regions no longer have higher participation rates than respondents from the other regions.
- The highest participation rate in 2006 is recorded for respondents from the Midlands
- N.B. Actual numbers of participants are higher in London/East /South East due to the larger population in this ITV region.

Figure 3 Activities categories

Sailing sports	Small sail boat racing, small sail boat activities, yacht racing, yacht cruising and windsurfing
Power Sports	Power boating, motor boating/cruising, canal boating and using personal watercraft
Manual sports	Canoeing, rowing and water skiing

Significant rises are observed in the sailing category for the 35-54 age group, C2DE, for people from the Midlands and families. There has been a decline in Wales/West/SW and in over 55's and greys. For manual sports significant rises are also observed for 35-54, people from the Midlands and families, with a decline in 16-34 year old participation.

The 55+ age group shows a significant rise in participation in the power category. This builds on an already significant increase in 2005. No other significant changes are observed in the power category.

Table 16 Participation in watersports categories by socio-demographic groups

		Watersport category				UK Population	Base

4. Regional Participation

Table 18 provides an indication of the variations in participation by residential area of the country in 2006. ITV regions have been grouped to provide more robust sample sizes and therefore more robust estimates of participation. However, it must still be considered that the sample sizes in some of the grouped regions are still relatively small varying between 356 and 3,904 across all activities. This means we can provide an indication of participation rates by region, but the statistics are less reliable than the national estimates.

We have highlighted participation rates where changes are statistically significant compared with 2005. The darker grey (or orange in colour copies) is used to indicate apparent rises in the participation the lighter grey (or blue) to indicate an apparent decline. However, the small numbers in each region for an individual sport mean that the data should be treated with caution. The numbers of respondents in each region are provided at the bottom of the table. The regions are defined as follows:

Figure 4 ITV regions

South East and East England	South, South East, East and London ITV regions (covered by Meridian, LWT & Carlton and Anglia)
The West	Wales, South West and West ITV regions (covered by West country, HTV and Central)
Midlands	Midlands ITV region (covered by Central)
Northern England	North West, North East and Yorkshire ITV regions (covered by Granada, Yorkshire and Tyne Tees)
Scotland	Border and Scotland ITV regions (covered by Grampian, Scottish and Border)
Northern Ireland	Northern Ireland

Table 19 shows our estimate of the percentage of people participating in each sport by ITV region. In Western and Northern regions we record a general decline in participation rates, 6 and 7 activities respectively out of the 21 have seen significant decreases in participation. The Midlands on the other hand has seen significant increases in 3 activities.

The top spot when looking at 'any boating activity' has now been taken by the Midlands at 10.11%. Hence, the Wales/West/South West region records no longer the highest participation rate of all ITV regions. Despite a significant drop in the Wales/West/South West region to 8.11%, it still records the highest participation rate in "any activity" (35.89%).

The 0% participation rate for some of the activities in the regions is due to the comparatively small sample size in this region. The sample for Northern Ireland is particularly small with just 356 respondents.

Table 18 Watersports and Leisure participation rates by ITV regions 2006

Base 1: all respondents from 2004 to 2006 Watersports and Leisure Omnibus Survey and all respondents from the 2004 BMF, RYA and Sunsail Watersports and Leisure participation survey (for the original 12 activities – above the dotted line)

Base 2: all respondents from 2005 and 2006 Watersports and Leisure Omnibus Survey and all respondents from the 2004 MCA Watersports Omnibus survey (for the additional MCA activities – below the dotted line)

5. Frequency of Participation

Table 21 shows the results from participants in each sport that reported the frequency of their participation. Each respondent was asked how often they had participated over the last 12 months, with answers ranging from never to more than 25 times. The average frequency of participation is estimated from this data and, for frequency of participation in the UK, also takes into account the number of events people say they are participating in (as detailed in section 8). This is done in two ways. Firstly, during the interview the respondent's answer given at the frequency of participation question was compared during with the number of actual events (occurrences participated) quoted later on in the survey. If there was a discrepancy between the frequency category and the number of events, the respondent was asked which one he thought was a better reflection of his participation and either the frequency category or events number adjusted accordingly. Secondly, for those participating more than 25 times in an activity their actual participation rate was taken into account when calculating the average participation. For the frequency of participation categories below this, a mean number was used to calculate the average participation (1 for once, 3.5 for 2-5, 9 for 6-12 and 19 for 13-25).

The tables show that for most sports more participation takes place in the UK than abroad. For example, Yacht racing displays a large difference in average participation rates, 4.6 times a year for the UK, compared to 1 times while abroad. Canal boating, rowing, coastal walking and angling (from the shore) are the activities people are least likely to do abroad. These results are consistent with previous years. There are two sports in which the majority of people

participate abroad. Leisure sub-aqua diving has the biggest proportion of people who only participate abroad. In 2006 half those participating in leisure sub-aqua diving, and more than half of those who participated in personal watercraft activities did so exclusively abroad.

Table 21 also shows variations in the average number of times people are participating in an activity. Average participation for Power Boating in the UK has for example risen from 5.1 times in 2005 to 6 in 2006. For other activities like canoeing or water skiing respondents are participating less in 2006 than in 2005.

Table 21 Frequency of Participation: UK

	Frequency of participation						Average participation			
	Never	Once	2-5 times	6-12 times	13-25 times	More than 25 times	2006	2005	2004	2003

Base: all respondents who participate in watersports
 Source: Watersports participation survey 2006

*Caution: small base size

The question about participation abroad only covered the original 12 activities. Only in water skiing and personal watercraft have more than 50% of participants done at least some of their participation abroad. The number of times people participate abroad is far less than in the UK. For example, the average participation for canoeing is 0.8 abroad, in the UK the average participation is 4.3. For using personal watercraft the average participation abroad is 2.3 compared to 4.9 in the UK.

Table 22 Frequency of Participation: Abroad 2006

	Frequency of participation						Base	Average participation

Table 25 shows the changes in the proportion of people carrying out any participation in UK and abroad from 2005 to 2006. Significant changes are highlighted in red. The change in yacht cruising, outdoor swimming and spending general leisure time at the beach show significant increases in the proportion of people undertaking at least some of their activity in the UK, whereas using personal watercraft has seen a significant drop. There are no significant changes for participation abroad.

6. Where the Balance of Participation is taking place

For the 12 original watersports we are able to examine where the balance of people's participation is taking place. This set of results is derived from bringing together each persons reported activity in both UK and Abroad. Their activities are then categorised into six groups to show where each person is doing their sport.

UK only	Only participated in UK
High in UK low abroad	Participated more than 5 times in UK and less than 6 times abroad.
Low in UK and abroad	Less than 6 times in UK and abroad.
High in UK and abroad	More than 5 times in UK and abroad.
Low in UK and high abroad	Participated less than 6 times in UK and more than 5 times abroad.
Abroad only	Only participated abroad.

It should be borne in mind that the numbers of people interviewed for each sport are small and therefore the data should only be taken as indicative of the overall patterns of participation.

Table 26 Where participation is taking place – 2006

	High in UK low abroad		High in UK and abroad		Low in UK and high abroad		Abroad only
	UK only	abroad	Abroad	Abroad	Abroad	Abroad

7. Combinations of Activities

Below we compare cross participation between the 3 aggregated watersports groups described earlier. These 3 groups only contain the original 12 watersports, not the activities added by the MCA.

Table 27 presents numbers and percentages of the proportion of people who do each type of sport who also participate in other types of watersports.

Table 27 Grouped Watersports Combination 2006

People who do	Also do					
	Sail		Power		Manual	
	No.	%	No.	%	No.	%
Sail	1,183,768	100%	251,020	17%	374,183	22%
Power	251,020	21%	1,469,261	100%	308,320	19%
Manual	374,183	32%	308,320	21%	1,665,869	100%

Base: All who participate in one or other Watersports.

Source: Watersports Omnibus Survey – 2006

In Table 28 we have combined data from 2004 to 2006 to provide an indication of the proportion of people who do an activity who also participate in other watersports. This increases the robustness of the estimates for individual sports, although distorts annual results. Even with 3 years data combined some of the smaller sports still have relatively small numbers of participants for the cross sport analysis. Proportions highlighted if greater than 20%.

Table 28 Watersports combinations – average 2004-2006

People who do...	Also do...												Base 2004-2006
	Canoeing	Water skiing	Small sail boat activities	Rowing	Using personal watercraft	Motor boating/Cruising	Yacht cruising	Power boating	Small sail boat racing	Windsurfing	Canal boating	Yacht racing

8. Distribution between Inland and Coastal Areas

Respondents participating in the UK were then asked how many of the events quoted at the previous question they had participated in at the coast and inland. NB Prior to 2006 this question was asked differently. Respondents participating in surfing, coastal walking and spending general leisure time at the beach were not asked this question

Table 29 Number of coastal and inland events in the UK

	Number of coastal events	Number of inland events	Number of total events	Number of UK participants (i.e. who participate in the UK)	Number of respondents

Spending general leisure time at the beach	56,091,487	-	56,091,487	5,229,301	1,267

Base: all respondents who participate in an activity in the UK *Caution: small base size

Table 30 shows which proportion of the events as shown in Table 29 are happening at the coast in 2006. It also compares this proportion with an average number of coastal events number across the past 3 years. Significant changes are highlighted in red. The most notable drops in the proportion of coastal events are recorded for:

- rowing (just 4.4% of events versus a running average of 19.6% for all three years).
- Small sail boat activities (48.3% of events versus a running average of 58.5%)
- Angling from a boat (39.2% of events versus a running average of 59.4%)
- Leisure sub-aqua diving (37.1% of events versus a running average of 54.5%)

In 2006 a total of 81% of all events were recorded as happening on the coast, whereas the average across 3 years is 85.8%. For the 12 boating activities 46% of events took place at the coast compared to 50% when taking an average across the past 3 years.

Table 30 Proportion of Coastal events

	Proportion of Coastal Events 2006	Proportion of Coastal Events Average 2004-2006	Change in 2006 (percentage points)	Number of respondents 2006	Number of respondents 2004-2006

9. Club Membership

Respondents were also asked if they are a member of a club for the activity or activities they participate in. For obvious reasons, this question was not asked of people participating in spending general leisure time at the beach.

Table 31 shows that only for small sail boat racing, yacht racing, yacht cruising and leisure sub-aqua diving club membership is close to 30%, diving has the highest proportion of club members. For all of the other activities club membership is not very wide spread. These proportions for club membership have stayed stable compared to 2005 for most activities. Big differences can be seen for activities with small base sizes. Cliff climbing and rowing show big drops in club membership rates compared to 2005, power boating shows a big increase.

Table 31 Club membership

	2006	2005	Change (percentage points)	Number of	Number of
				respondents 2006	respondents 2005

*Caution: small base size

Table 31 shows the number of events (i.e. each time a person participates) last year of club members and non-club members. It shows that in some sports there seems to be a clear relationship between the number of events and club membership. For example, only 16% of respondents who participate in small sail boat activities in the UK said they are a club member, but when looking at their number of events they generate 40% of the total events in that activity in the UK. Club members for leisure sub-aqua diving generate even 80% of the total events in the UK.

Table 31 Number of events by club membership status

	Club member				Non-club member				Total number of respondents		
	Number of coastal events	Number of inland events	Total number of events	UK participant number	Number of respondents	Number of coastal events	Number of inland events	Total number of events		UK participant number
